

## IS GASOLINE REALLY NECESSARY?

DO WE REALLY NEED GASOLINE TO RUN OUR AUTOMOBILES, ENGINES AND MOTORS?

The answer to that question is

N O !

Back in the 1930's, an amateur experimenter discovered a revolutionary new propulsion system which he obtained a patent for. He called it an "ELECTRIC ROCKET". A major oil co. has been reported to have paid the inventor a MILLION DOLLARS for his patent. They then swore him to secrecy and signed a contract with him calling for the return of all monies paid to him if he told anyone about it. WHY? Because the device this young amateur inventor had created will make gasoline (Fossil Fuel) obsolete. What he invented not only will provide clean, safe, and efficient propulsion for vehicles, aircraft, spacecraft, and machinery of all types, it can also be used to run ordinary electrical generators and collect more energy than required to keep it running.

Now YOU CAN GET THE PLANS FOR THIS DEVICE AND YOU CAN BUILD IT YOURSELF from easily obtainable materials you can get from your local hardware store. It is simple to make and will power an entire house for centuries. It is a small 6" X 8" engine that just might be able to propell vehicles in case our gasoline supply disappears.

Even though you may not be interested in building one yourself, can you imagine the number of people that might be? These plans come with full reprint and resale rights so you can copy them for a few cents each and sell as many copies as you want at a great profit.

Right now is the PERFECT time to get these plans. With all the unrest and unknown crisis facing us today, you never know when you could need them. So order right now. Send just \$7.00 to me at the address below and I'll send them to you right away, post paid. Hurry! Time is going fast.
